Education

Texas A&M University

May 2026

College Station, TX

Bachelor of Science, *Computer Engineering*

Relevant Coursework: Software Engineering, Data Structures & Algorithms, Machine Learning, Introduction to Computer Systems, Computer Architecture, Program Design and Concepts, Linear Algebra, Discrete Mathematics

Organizations: Engineering Mentorship Council

Skills

Technical: Python, C++, C, SQL, Java, React.js, Node.js, Angular, HTML, CSS, Assembly, Verilog

Tools: AWS, Azure DevOps, Jira, Snowflake, Power BI, Google Cloud Platform, Git, GitHub, Linux, PyTorch, TensorFlow, Transformers, NumPy, Pandas, Tableau, Jupyter Notebook, Microsoft Office

Languages: English (fluent), Telugu

Experience

Software Engineering Intern – CBRE, Inc.

June 2025 – August 2025

Richardson, TX

- Designed and deployed a Power BI dashboard processing 30,000+ Snowflake audit records, streamlining reconciliation and indirect accounting for the FinOps team
- Engineered an agentic pipeline to automate tariff data processing, eliminating 50+ hours of manual lookups, enabling advanced historical cost analysis, and reducing budget overruns by over 25%
- Built a React.js web interface for investment management insights, delivering portfolio analytics and a leasing office exposure map to assess geographic risk across 200+ properties in real time

Global Career Accelerator – Coding for Data

May 2024 – July 2024

- Wrangled over 16 real-world datasets using SQL, Python, and Tableau, generating actionable insights into demographic trends, energy consumption, and market strategies
- Analyzed over 2,700 website traffic records from Grammy.com and RecordingAcademy.com, comparing user behavior before and after the domain split to identify engagement improvements
- Evaluated energy production and consumption metrics across 50+ U.S. regions to determine an optimal location for a new Intel data center

Projects

Boba Tea Restaurant Point-of-Sale System

February 2025 – May 2025

- Developed a full-stack POS system for a boba tea restaurant with employee and manager views, enabling order processing, menu management, and drink customization with 15+ options per item
- Built a React and CSS frontend with Express.js APIs and PostgreSQL, adding high-contrast accessibility and multi-language support across 50+ languages
- Delivered a more accessible and inclusive POS experience for visually impaired and multilingual customers through iterative UI improvements in Agile sprints tracked in Jira

Fine Tuning Mistral 7B for News Article Classification

August 2024

- Processed news article data from over 2,000 sources and employed advanced tokenization techniques
- Implemented QLoRA with 4-bit quantization to fine-tune Mistral 7B and improved scalability by reducing the number of trainable parameters
- Integrated QLoRA into the Transformers library to optimize training speed, effectively classifying articles into various genres
